**TITLE: International Standards Organization (ISO) 3166 Country Codes and XML Schema: Proposed tML ISO 3166 Standard**

**Source: US TAG to JTC 1/SC 32/WG 1**

[Prepared by Raymond E. Reeves, Sprint]

**Status:** Contribution to work on ISO/IEC 18038 (and 18022)

[See also a similar contributions on proposed tML ISO 4217 standard and proposed tML ISO 10646 standard, the latter already contributed as JTC1/SC32/WG1 N177]

**Action:** For consideration in relation to work on 18038 (and 18022). The document represents a proposed standard of a telecommunications Markup Language (tML) schema following the rules and guidelines defined in the tML standard framework. The document was originally prepared to assist the ANSI Accredited Standards Committee T1 – Telecommunications, i.e. ANSI ASC - T1. Contribution will be modified to reflect progress of work on ISO/IEC 18038.

**DRAFT STANDARD**

**TITLE:** International Standards Organization (ISO) 3166 Country Code:  
XML Schema  
**SOURCE\*:** Sprint  
**PROJECT:** tML

---

**ABSTRACT**

This proposed standard presents a telecommunications Markup Language (tML) schema for the current International Standards Organization (ISO) 3166-1 Country Codes - Alpha 2, Alpha 3 and Numeric code 3.

This document uses XML Schema's following the XML Schema Specifications (W3C Recommendation, 2 May 2001). This proposed standard follows the rules and guidelines defined in the tML standard Framework.

**NOTICE**

This contribution has been prepared to assist Accredited Standards Committee T1 – Telecommunications. This document is offered to the Committee as a basis for discussion and is not a binding proposal on Sprint or any other company. The requirements are subject to change in form and numerical value after more study. Sprint specifically reserves the right to add to, amend, or withdraw the statements contained herein.

## **LIST OF FIGURES**

Figure 1. Country codes model.....	10
------------------------------------	----

## **1. Introduction**

As part of the work requested from the Digital Subscriber Line (DSL) forum to create standard XML Schemas for their service provisioning interfaces, some standardized data elements have been found. Some of these codes fall into the category of elements standardized by the International Standards Organization (ISO). The specific ISO standard referenced is the ISO-3166 standard for country codes using both Alpha 2 and Alpha 3 codes.

### **1.1 Purpose**

This contribution presents a proposed standard XML Schema for the several ISO-3166 standardized country code representations and considers the guidelines established by the telecommunication Markup Language (tML) Ad-Hoc Group (AHG).

### **1.2 Scope and issues**

This proposed standard presents the XML Schema corresponding to the requirements set forth in ISO-3166-1 for Alpha 2, Alpha 3 and Numeric 3 country codes. The semantics expressed in the herein contained schema have the inherent limitations of the XML Schema description language.

Because the tML standards Framework is still a document in review, it is expected that some aspects of the propose schema might be subject to review. Especially subject to review are the namespace names and the location of some highly reusable tag names.

### **1.3 Conventions Used in this Document**

The reader should be aware of several conventions used in this document. The most important one is that code (either XML Schema -.xsd-, XML instance document -.xml-) will be shown in *tahoma 8 point font*.

The XML Schema version used is <http://www.w3.org/2001/XMLSchema>, May 2<sup>nd</sup>, 2001 XML Schema Recommendation.

## 2. Definition of the XML Schema

The following sections provide the proposed standard implementation of XML Schemas and XML tags corresponding to the current ISO-3166-1 standard country codes. All XML Schemas presented in this document have been validated and could be revalidated, with minimum changes, by any XML Schema validating editor.

### 2.1.2. UML Model

These code sets are defined within the ISO-3166 package and contains three enumeration datatypes, one for each country code representation. Each enumeration contains a property-list with a series of “value” entries for each country code.

### 2.1.3. XML Schema

These code types are controlled by a maintenance authority and lend themselves for an enumeration of the permitted or listed values in the standard. As a result, the corresponding XML Schema follows:

```
